Frost (gloss)

Deep Blue (gloss)

Black (gloss)

Black (matte)

Strawberry (matte)

The colors printed on this page are not exact. Please request a current glaze sample.

This information guide has been developed to help our customers better understand the range of usage and variance inherent in each glaze. We see this information as general information.

Variation In Shading

Below we have listed each glaze and its' relative variance. #5 would represent a white glaze with the least amount of variance. #1 would represent a colored crackle that might have the most amount of variance. Special notes will include; descriptions of how dark colored crackles will pool on decos, liners, and molding details.

1. **Limited Variation** - These colors show little or no variation and are very stable shipment to shipment. Blending during installation is recommended.

Note: All mattes are made from commercial glaze base and require no sealing.

2.- 3. **Medium Variation** - Similar in description to wide variation but less than half the occurrence. Caps and decos show less shading variance in areas of pooling. Variation shipment to shipment almost non-existent. Blending during installation is highly recommended.

4.- 5. **Wide Variation** - This is typical of Dark Crackles and Translucent Tints. May also be very evident in areas pooling on molding and deco pieces. Color tones and shades may vary from shipment to shipment. As with any tile blending during installation is highly recommended.

Durability And Suitable Application Areas

1. **Light duty** - Intended for interior residential vertical surface installation. May also include commercial use in similar vertical surface applications depending on intended use of space.

2. **Medium duty** - Intended for use on most residential vertical surfaces and includes some horizontal applications. May also apply to light duty vertical commercial applications. Residentially this includes shower walls, bathroom walls, kitchen back splashes and some light use kitchen counter tops*.

3. **Heavy duty** - would apply to all interior residential floor, counter top*, and wall applications.

* Light use kitchen counter tops are defined as infrequently used for extensive cooking. Note: Dark gloss glazes should never be specified on counter top applications.

NAME	NUMBER	TYPE	VARIATION	DURABILITY	NAME	NUMBER	TYPE	VARIATION	DURABILITY
